

The Imagine Bifold Door Suite

A beautiful way to bridge the gap between your home and garden

Proven Performance.

When the weather is good the Imagine Bifold door provides a seamless flow of home and garden, creating a unique sense of space, natural light, and fresh air. The 30mm low threshold option is perfect for accessibility, without compromising weather performance.

During the winter months, the Imagine Bifold door creates a tight seal, so you can cosy up in the warmth, without losing your stunning view. The 'traffic door' feature means you can easily enter and exit without fully opening and closing all the door panels.

Creating unique and adaptable spaces, the flexibility of the Imagine Bifold door can separate rooms and create different environments within your home to suit the whole family.

At work you can design practical space solutions for both private and group meetings within the same room footprint. Flush, low thresholds will give you the freedom to move furniture easily to accommodate all your layout requirements.

- › Smart, stylish, and contemporary
