

# Market Leading Composite Doors

Make the perfect entrance...

Thermally efficient products keep the cold out and the warmth in, reducing the cost of rising energy bills and our impact on the environment. The Consort Magnum GRP door is more energy efficient than a traditional timber door with a high-performance insulating core and high-performance insulated glass.

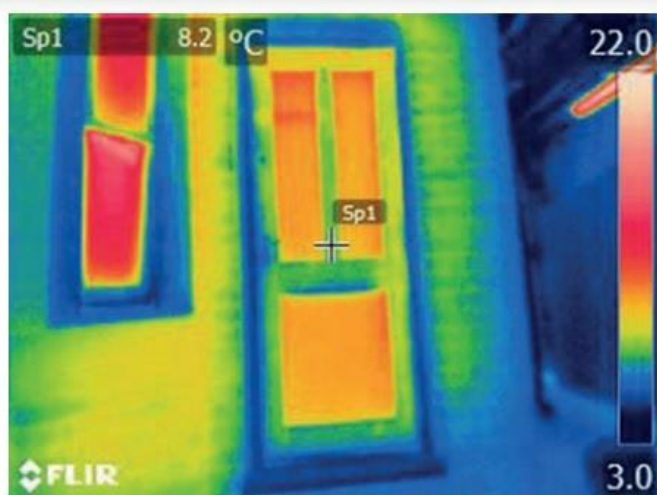

The strength of a Magnum Door comes from its construction – a solid, water-resistant polymer material, reinforced with Laminated Veneer Lumber (LVL). GRP skins give an authentic timber look and are bonded onto this sub-frame, and the core is filled with high density, 100% CF free polyurethane foam.

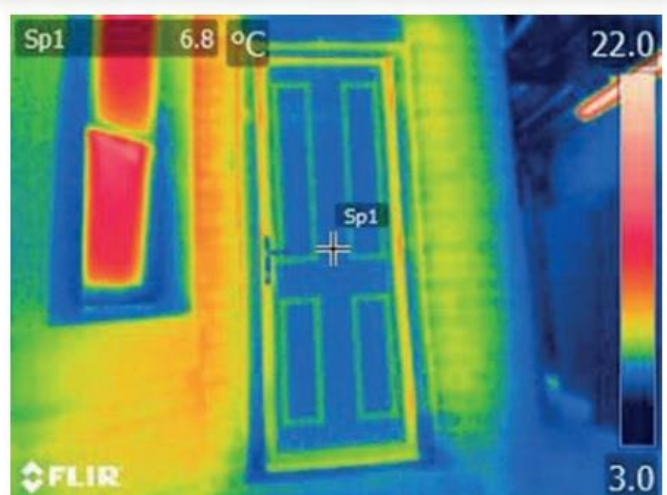

What makes the Magnum door special is the fantastic array of security features fitted as standard – 5 point security locking, 3\* security cylinders and security handles, all performance tested to PAS24 and Secured By Design Approved.

- › Energy Efficient – Achieves U Values of 1.4W/m<sup>2</sup>K using double glazing
- › Consort independently verified BS EN6375 weather, strength, and operation testing
- › Consort independently verified PAS24 security testing and BSI Kitemark accreditation
- › Police Preferred Secured By Design approval specification as standard
- › 5 point locking, 3\* security cylinder, and security handle as standard
- › Discreet and fully Adjustable 3D door hinges
- › Impact-resistant thermoset GRP skin
- › Inward and outward opening door options
- › Extremely low maintenance – no need for painting and easy to wipe clean
- › Manufactured by Consort to an ISO9001 Quality System

Traditional timber panelled door
